

Low power use

Quantum is the new jet dryer developed by Airdri to offer fast hand drying with low power consumption, low noise output and reliability in operation. The manufacturer claims it can dry hands in 13 seconds.

This new model runs on 200 watts and features a universal voltage of 100v-240v, making it immediately suitable for installation in any location. And it also complies with ADA disability requirements which means it can be used in disabled facilities and washrooms limited in space.

Airdri says Quantum has a lifespan at least five times longer than other jet dryer models, and it comes with a three-year warranty.

Most hygienic?

According to research commissioned by the European Tissue Symposium (ETS), single-use paper towels are the most effective way to dry one's hands in the washroom. A study carried out by the University of Westminster indicates they help to minimise the spread of viruses including ones associated with various diseases, including those causing gastrointestinal infections such as Norovirus and Rotavirus.

This research was first presented in October 2015 and

says single-use towels disperse fewer microorganisms into the environment than jet air dryers and warm air dryers and also help reduce the risk that viruses are blown into the faces of small children accompanying adults in the washroom.

Plant-based

Using its patented technology, Salveco has developed a range of plant-based professional surface and hand disinfectants. These disinfectants are the first in the world to benefit from the simplified authorisation procedure, the company says, which aims to encourage the use of biocidal products that have a more favourable environmental or human and animal health profile.

The solution is made exclusively from renewable and safe resources.
