

- Dualflow est la nouvelle gamme de sèche-mains à "insertion" proposée par Mediclinics dans un souci d'économie et de protection environnementale.
- CWS affirme que sa gamme de distributeurs de toilettes ParadiseLine en acier inox est conçue dans un souci de convivialité face à l'utilisateur.
- La gamme Bay West de distributeurs Disposables UK livre des serviettes, du papier hygiénique et du savon.
- Le produit GrittyFOAM de la société Deb combine la technologie du savon mousse à des bioaveurs non abrasifs.
- D'après European Tissue Symposium, le papier présente le moyen le plus hygiénique de se sécher les mains.

- Dualflow ist die neue Produktreihe mit Handtrocknern von Mediclinics, die im Hinblick auf Umweltbewusstsein und Kosteneinsparung konzipiert wurde.
- Laut CWS wurde die Produktreihe ParadiseLine mit Waschschaumspendern aus Edelstahl unter besonderer Berücksichtigung der Benutzerfreundlichkeit konzipiert.
- Die Produktreihe Bay West mit Spendern von Disposables UK bietet Handtuch-, Toilettenpapier- und Seifensysteme.
- GrittyFOAM von Deb kombiniert Schaumseifentechnologie mit nicht scheuernden Bio-Reibemitteln.
- Laut European Tissue Symposium ist Papier die hygienischste Art des Händetrocknens.

- Dualflow è la nuova gamma di asciugamani elettrici 'con inserimento delle mani' prodotti dalla Mediclinics progettati per essere ecologici e per ridurre i costi.
- La CWS afferma che la sua gamma di dispenser per sale da toilette in acciaio inossidabile ParadiseLine è stata progettata pensando alla facilità d'uso.
- La gamma di dispenser Bay West prodotta dalla Disposables UK include sistemi di asciugamani, carta igienica e sapone.
- GrittyFOAM della Deb abbina la tecnologia del sapone in schiuma con i bio-esfolianti non abrasivi.
- La European Tissue Symposium afferma che la carta è il sistema più igienico per asciugare le mani.

Energy savings

Available in either white or satin aluminium finish are the new 'hands-in' hand dryers developed by Mediclinics. Low energy consumption is a key feature of the dryers, the company says, and it claims savings of up to 73 per cent compared to similar models.

Drying time is said to be eight seconds, making it suitable for use in high traffic areas. The speed regulator on the motor helps to reduce energy consumption and noise level.

The surface and water tank are coated with Biocote, an antimicrobial and antibacterial protection that inhibits the reproduction of micro-organisms throughout the life of the product. The filter is treated with SurfaceAide XL, which prevents the growth of bacteria, mould and mildew.

Optional extras include anti-graffiti protection and odour-neutralising tablet.

Award winner

The ParadiseLine stainless steel range of dispensers from CWS-boco was recently awarded the 'Design Plus powered by ISH 2013' label for its design quality, technical and ecological aspects.

Made in high quality stainless steel and seamlessly ground for optimum hygiene ParadiseLine dispensers are suitable for use in the healthcare and food industries because their smooth surface prevents bacteria from settling.

User friendliness has been a

top priority in the design - with an ergonomic lever system and easy pull-out function. Other features include service level indicators, quick replacement of used cotton towel rolls and click-in system for soap cartridges.

Consume less

The Bay West range from Disposables UK encompasses hand towels, toilet tissue and soap dispensing systems.

The paper towel dispensers, for example, are specifically designed to reduce paper consumption, which in turn reduces cost and waste. In fact the range was chosen for use within the Olympic Park during London 2012, where 16,000 Bay West dispensers were installed.

The company has analysed every part of its manufacturing processes to ensure stringent environmental guidelines are met - it has now been awarded the EU Ecolabel.

Gritty cleanser

Deb's new heavy duty hand cleanser GrittyFOAM is a combination of the company's foam science, dispensing technology

and non-abrasive bio-scrubbers suspended in a rich cream foam. This, it says, gives a deep clean without damaging the skin.

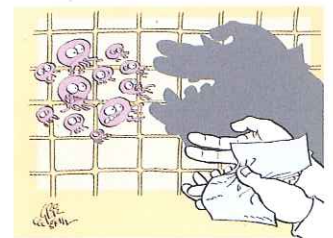

Foam spreads rapidly over the hands, emulsifies soiling and rinses away quickly, which means less time, water and associated energy are required for a complete hand wash - claims Deb. Three ml of liquid Gritty-FOAM produces five times the volume in foam.

The June/July edition of ECJ will feature a special report on hygiene in food preparation areas. Register online now for your copy.

Drying study

A new study commissioned by the European Tissue Producers (ETS) has focused on the contamination of hand drying equipment and washroom floors. Eurofins-Inlab tested 150 washrooms in Germany, equipped with warm air dryers (50), jet air dryers (50) or paper hand towel dispensers (50).

ETS says that a user of a jet air dryer is likely to be exposed to over 1,000 times more microorganisms than the user of a paper hand towel dispenser. The floors under jet air dryers had on average 20 times greater levels of contamination when compared with the floors under paper hand towel dispensers - according to ETS.
